

[A4] Feet into Place

Stefano Papetti, Federico Fontana, Marco Civolani

Zurich University of the Arts, Switzerland; University of Verona, Italy; University of Udine, Italy

“Feet into Place” is an installation to be experienced through the feet and ears, which provides underfoot tactile sensations within immersive nonvisual scenarios. Guests will enter a dark room and, by wearing a pair of haptic shoes, they will feel different ground materials or moving objects underfoot. Background soundscapes will add further realism. At least two scenarios will be presented: a forest with wet underbrush and muddy grounds, and a synthetic space populated with marbles rolling and bouncing around.

The installation focuses on the engagement offered by rich haptic and auditory cues while exploring a dark environment.
